## 2.2.1 Attribution Equities / Overview

	Fund	Performance (in %) Benchmark	Active
Performance Attribution	2.04	2.04	0.00

Performance attribution excludes costs and contains a new calculation of fund- and benchmark-performance using a single price-source for both which could result in differences between performance attribution and official fund-valuation.

Residual = Official Performance - Performance Attribution. The residual could be due to transaction-costs and not-registered fix costs

## 2.4 Portfolio Manager's Comment

### Monthly news

March has seen another rise in stock markets around the globe concluding a remarkable catch-up of equities in the first quarter following the sell-off in the fourth quarter of 2018. The equity rally in 2019 was built on more optimistic expectations regarding the Fed interest rate policy and improvements in the ongoing trade policy discussion. European markets climbed 2% in March, followed by US equities (+1.7%) and Emerging markets (+1.4%), all in local currency terms.

Despite the recovery in markets, the Fed is discussing to adjust its inflation target in a way to move to averaging figures instead of reacting to a short-term, temporary rise of inflation above 2%. Consequently the Fed has the possibility to conduct a more dovish rate policy if economic activity weakens in the coming months.

Regarding the trade conflict between the US and China there remains uncertainty how negotiations will evolve. Even if an ongoing truce between US and China can be reached on trade relations the tension towards the European counterparties will likely remain.

Future market returns will therefore depend on a more robust economic expansion. The macroeconomic data in the first quarter was more mixed. The weakness in the global expansion was most notable in the manufacturing and export sectors. Eurozone industrial production declined more than 2.5% since its peak at the beginning of 2018. Korean and Taiwanese exports declined 8% over the year not only due to trade tensions but also a softer than expected Chinese demand. On the other hand China's non-manufacturing PMI increased to 54.8 and manufacturing PMI rebounded over 50. Chinas authorities are now stimulating domestic demand by a mixed package of tax cuts, credit stimulation and infrastructure investment which should lead to a stabilisation in Chinese growth. Unemployment continues to decline in a global context, to 7.8% in the Eurozone and 3.8% in the US. The ECB kept deposit rate steady at -0.4% and postponed the first rate increase until at least next year. It also announced to support the Eurozone banking sector via measures to reduce the drag that negative rates have on bank profits.

### Styles/sectors

In March investment styles showed mixed results. Value continued its underperformance across regions while quality and low volatility performed well relative to the standard indices. Momentum was positive in Europe, the US and emerging markets while small caps corrected overall, most notably in the US but also in Europe. Furthermore, the combination of different factors / styles had a weak performance relative to the average of factor returns, as the diversified multi-factor index declined between 1% and 2% on a relative basis in the US, Europe and EM.

Sector returns showed slight outperformance in the defensive segments with consumer staples and telecom services outperforming across regions. Industrials and financials remained weak overall, health care underperformed in the US and EM but not in Europe.

Factor	Fund	BM	Difference	Weight (Fund)	Weight (BM)
E	5.16	5.34	-0.19	25.06	22.85
S	4.94	4.53	0.41	43.78	45.12
G	4.24	4.04	0.20	31.16	32.02
ESG weighted Score	4.54	4.37	0.17		
IAS	4.62	4.28	0.34		
ESG Rating	BBB	BB			

E (Environmental), S (Social), G (Governance).  
The Score is between 0 (worst) and 10 (best).  
The ESG weighted Score is an average of the ESG Scores using company specific weights.  
The Industry Adjusted Score (IAS) is additionally normalized in relation to a comparable industry group according to key ESG-Issues.  
The IAS is mapped to a Letter Rating between AAA and CCC according to a fix rule.  
All figures are weighted over the whole reporting period.

## 4. Glossary

Alpha	The asset manager's active management performance. Alpha is an indicator for the fund's performance relative to the benchmark index. There are different conventions for calculating alpha: Quoniam defines alpha as the difference between the account's performance (excluding fixed costs) and the performance of the benchmark index (in accordance with ® GIPS). This definition differs from the commonly used concept of 'Jensen's alpha', which refers to the risk-adjusted excess return of an account over the benchmark index.
Beta	Beta indicates the systemic (market) risk of equities. A share (or portfolio of shares) with a beta of 1 has approximately the same sensitivity to changes in the benchmark index as the benchmark itself.
Coupon	Nominal interest rate
Discount margin (DM)	Theoretical interest rate mark-up on the reference index of a floating-rate bond, based upon which the bond would trade at par.
Dividend yield	The ratio of dividends paid over the last twelve months and the current share price, expressed as a percentage.
Earnings growth	Growth of earnings per share – defined for the purposes of performance reporting as the ratio of earnings data for the next financial year (FY1, cf. P/E ratio), based on analysts' estimates, to data from the last published financial statements. <u>FY2 denotes the financial year following FY1.</u>
Fixed costs (overheads)	A fund's fixed costs include: management fees, custodian bank fees, securities account fees, auditing fees, publication costs, plus any debit interest incurred.
GIPS	Global Investment Performance Standards – internationally accepted standards for the presentation of investment results.
Information ratio	An indicator for assessing management performance, defined as the ratio of outperformance (® alpha) to active risk exposure (® tracking error).
Internal Score	Quoniam determines a so-called <i>Internal Score</i> for ABS, RMBS, CMBS, CDOs, CLOs and CFOs. Based on most recent performance reports, this score provides an assessment of how such structures are collateralised, largely independent of ratings. The following parameters are used for this purpose:
	· The <i>Reserve Amount (RA)</i> expresses the excess collateralisation of a specific transaction tranche, as a percentage.
	· The <i>Worst Loss (WL)</i> to occur for an ABS transaction is based on the assumption that a default occurs for all receivables due for more than 90 days, and the recovery rate is only 50%.
	· The <i>Safety Ratio (Adj. SR)</i> indicates the multiple of estimated Worst Loss that can occur without eroding the substance of the tranche analysed. The indicator is expressed as the logarithm of this multiple.
	· The <i>Internal Score</i> translates Adj. SR into a verbal, analytical assessment of the transaction.
	Even though we take due care in collating and analysing all underlying information from rating agencies, investor reports, and brokers, as a manager we cannot accept any liability for the correctness of such data and information, or for the resulting analyses and investment decisions. A full description of the methodology applied, and of the underlying data, is available upon request; this information is subject to certain licensing restrictions.
Leverage	Leverage is defined as the aggregate of long exposure and short exposure.
Long exposure	Long exposure is defined as the sum of all delta-weighted positions with a positive value, relative to the fund's assets.

## 4. Glossary

Macaulay Duration	(Remaining) lifetime of a bond, weighted using the present values of its cash flows.
Market capitalisation	Average market capitalisation of securities held by the fund (in € million), including only those issues with free float.
Market price (investment currency)	Market price in investment currency, as at the valuation date. For asset-backed securities, this price information is provided by Markit, and is subject to a disclaimer issued by that vendor. Please refer to our related letter for details. (We will be pleased to provide an additional copy of this letter upon request.)
Maturity	A bond's (final) maturity date.
Modified duration	Sensitivity to a change in yield.
Net exposure	Net exposure is defined as long exposure less short exposure.
Number of issues	The number of issues indicates the number of individual issues contained in the fund, or in the benchmark index.
P/E ratio (current, FY1, FY2)	Price/earnings ratio, defined as the ratio of current share price to earnings per share. "Current" P/E is based on earnings for the last financial year for which financial statements have been published; "FY1" P/E is based on analysts' earnings estimates for the financial year following the financial year for which financial statements have been published; "FY2" is based on estimated earnings for the financial year following FY1.
Position	Referring to an investment instrument, a 'position' is defined as follows:
	<ul style="list-style-type: none"> <li>a) for instruments that are not derivatives, the instrument's market value (which may be negative);</li> <li>b) for instruments that are derivatives, the market value of the underlying instrument (which may be negative). For the sake of clarity, the negative market value is included for underlying positions that represent actual short positions.</li> </ul>
Price to book value	Valuation indicator, defined as the ratio of current share price to net asset value (equity) per share.
Price to cash flow	Current share price, divided by the cash flow per share.
Quoted margin	Interest rate mark-up on the reference index of a floating-rate bond (e.g. Euribor + 0.15%).
Return on equity	Indicator for a company's profitability; defined as the ratio of profit to equity invested.
Sharpe ratio	The Sharpe ratio is a measure for the risk-adjusted performance of an asset class. It is defined as portfolio performance less the risk-free interest rate, divided by $\sigma$ volatility. The primary purpose of the Sharpe ratio is to assess whether the selected asset class (equities, bonds, etc.) was the right one; it is less appropriate for assessing management performance (cf. $\beta$ information ratio).
Short exposure	Short exposure is defined as the sum of all delta-weighted positions with a negative value, relative to the fund's assets.
Spread duration (SDur)	Sensitivity to a change in credit spread. For fixed-coupon bonds, spread duration is identical to modified duration. For floating-rate bonds, spread duration is identical to modified duration of a fixed-coupon bond with the same remaining time to maturity.

## 4. Glossary

Swap	A swap is a bilateral agreement to exchange assets or future cash flows, subject to certain conditions. Swaps can be used to hedge specific portfolio risk, or to add exposure to a portfolio in order to optimise returns. Examples include:
	a) Credit Default Swap (CDS) – A Credit Default Swap is a credit derivative that can be used to trade the default risk exposure of a loan or bond, or of a reference entity. The protection buyer usually pays a regular fee, and will receive a compensation payment if the credit event defined at the outset should occur.
	b) Equity swaps are characterised by an exchange of cash flows, whereby one cash flow is linked to a reference interest rate, and the other reflects the performance of a share or equity index.
Total Expense Ratio (TER)	TER reflects the ratio of all non-transaction costs charged to the fund's assets, to the fund's average net asset value during the current financial year. Transaction costs are not included in the TER.
Tracking error	The tracking error is an indicator for the risk caused by active management decisions. It measures the fluctuation range of outperformance (® alpha). Tracking error is defined as the annualised standard deviation of monthly alpha values. (Also refer to ® volatility.)
Value-at-risk (VaR)	VaR is a measure for the maximum potential loss exposure of a portfolio that is not exceeded within a given holding period, and based on a given probability (confidence interval). VaR is usually derived from ® volatility.
Volatility	Volatility is an indicator for the absolute (total) risk of an asset class. It measures the fluctuation in overall performance. Volatility is defined as the annualised standard deviation of monthly returns.
Weighted average life (WAL)	Average (remaining) lifetime of a bond with prepayments (e.g. asset-backed securities).

## 5 Remarks to Liquidity Risks for Equities

### Regulatory Environment

- MiFID led to more market fragmentation and an increase in competition

### Market Trends

- The liquidity of the global equity markets, measured as trading turnover relative to market, has been stable since the end of the 2000s
- Increased importance of implementing "Smart Order Routing" technology

### Liquidity

- In principle, stocks are less associated with liquidity risks than bonds
- After specific market events, the ability to trade may be very limited
- Single purchases or sales can bring about large price fluctuations
- Scenarios where liquidity shortages arise as a consequence of divestments only possible via steep price discounts or not possible at all
- Redemptions cannot be executed or only partially carried out, in which case, we would promptly inform clients

Consequently, we advise the recipient to turn themselves to the respective investment company.

For more detailed information, in particular a description of the mentioned funds' risks and rewards, please refer to the prospectus, the key investor information document and the most recently published annual and semi-annual report. These publications are available upon request and free of charge from the German payment and information agents, DZ BANK AG (Frankfurt/Main). The aforementioned documents constitute the sole binding basis for the purchase of fund units.

The information contained herein does not consider any personal and financial circumstances of the recipient. Therefore it does not constitute an offer or a recommendation to buy or sell financial instruments or banking services. Neither historical nor future performance simulations and financial market scenarios are a guarantee for current or future performance. We advise the recipient to seek investment advice in order to ensure that information provided is in line with their own circumstances.

This document has not been prepared in accordance with legal requirements designed to promote the independence of investment research. Further, it is not subject to any prohibition on dealings ahead of the dissemination of investment research. As a consequence information and opinions herein must not be read as independent investment research.

This document shall not be reproduced or passed on to third parties either in part or in full without the written permission of Quoniam.

Quoniam is authorised and supervised by the Federal Financial Supervisory Authority (Bundesanstalt für Finanzdienstleistungsaufsicht) and is subject to limited regulation by the Financial Conduct Authority. Details about the extent of our regulation by the Financial Conduct Authority are available upon request.

Quoniam processes your personal data including name, gender, postal address, e-mail address, phone number and job title within our business correspondence based on article 6 paragraph 1 lit. b) and f) GDPR. Controller in terms of article 4 number 7 GDPR is Quoniam Asset Management GmbH, Westhafenplatz 1, 60327 Frankfurt am Main. For further information please read the [data privacy section in our legal notices](#). You do not want to receive further information from Quoniam? ## 7 Disclaimer MSCI

### **Global Industry Classification Standard (GICS)**

The Global Industry Classification Standard ("GICS") was developed by and is the exclusive property and a service mark of MSCI Inc. (MSCI) and Standard & Poor's, a division of The McGraw-Hill Companies, Inc. ("S&P") and is licensed for use by Quoniam Asset Management GmbH. Neither MSCI, S&P nor any third party involved in making or compiling the GICS or any GICS classifications makes any express or implied warranties or representations with respect to such standards or classification (or the results to be obtained by the use thereof), and all such parties hereby expressly disclaim all warranties of originality, accuracy, completeness, merchantability and fitness for a particular purpose with respect to any of such standard or classification. Without limiting any of the foregoing, in no event shall MSCI, S&P, any of their affiliates or any third party involved in making or compiling the GICS or any GICS classification have any liability for any direct, indirect, special, punitive, consequential or any other damages (including lost profits) even if notified of the possibility of such damages.

### **MSCI ESG Research LLC**

Although Quoniam Asset Management GmbH's information providers, including without limitation, MSCI ESG Research LLC and its affiliates (the "ESG Parties"), obtain information from sources they consider reliable, none of the ESG Parties warrants or guarantees the originality, accuracy and/or completeness of any data herein. None of the ESG Parties makes any express or implied warranties of any kind, and the ESG Parties hereby expressly disclaim all warranties of merchantability and fitness for a particular purpose, with respect to any data herein. None of the ESG Parties shall have any liability for any errors or omissions in connection with any data herein. Further, without limiting any of the foregoing, in no event shall any of the ESG Parties have any liability for any direct, indirect, special, punitive, consequential or any other damages (including lost profits) even if notified of the possibility of such damage.
