Disclaimer	31

The Fisch product report is intended for institutional investors and financial professionals only and provides an in-depth description of the investment strategy and the products based thereon. The Fisch product report should not be distributed to retail investors. The product report contains gross and net performance figures. Gross figures are suitable for benchmark strategy comparisons, for the evaluation of management performance and especially for comparisons of performance components/aspects (contribution, attribution, volatility, etc.). Net figures reflect the performance of a fund after costs. Such costs and commissions result in a decrease of the achieved performance.

Summary

Strategy

Investments in attractive, high yield corporate bonds

The FISCH Bond Global High Yield Fund invests globally in attractive high yield corporate bonds. Through focused implementation of the five independent and complementary alpha sources: credit exposure, regional/sector allocation, duration, issuer assessment and relative value, we achieve a stable portfolio alpha.

Summary as of 28.06.2019

Performance Key Figures - EUR	Strategy	Benchmark	Relative
Month to Date Return	2.32%	2.16%	0.15%
Quarter to Date Return	2.15%	2.01%	0.14%
Year to Date Return	8.27%	8.21%	0.06%
Return 1 Year	5.17%	5.33%	-0.16%
Annualized Return 3 Years	5.52%	5.05%	0.48%
Annualized Return 5 Years	4.90%	3.32%	1.58%
Annualised Return since Inception (01.04.2012)	7.06%	5.49%	1.57%

Portfolio Key Figures	Strategy	Benchmark
Yield to Worst	5.7%	5.5%
Credit Spreads (bps)	380	418
Average Rating	BB-	B+
Spread Duration	3.3	3.4
Modified Duration to Worst	3.3	3.4

Strategy Global high yield corporate bonds (gross of fees, EUR hedged)

Benchmark ICE BofA Merrill Lynch Global High Yield Index (HW00) EUR hedged. These returns are calculated on the basis of the official calendar month end prices.

» *First half of year dominated by many rising stars*

Manager Report

Peter Jeggli
Lead Portfolio Manager

The high yield bond market rose by 2.2% in June (benchmark: ICE BofAML Global High Yield Index, EUR hedged) and therefore more than made up for the decline in May. The benchmark thus produced a total return after hedging costs of 9.9% in USD, 8.2% in EUR and 8.1% in CHF in the first half of the year.

June was once again heavily influenced by the trade talks between the US and China, but even more so by the about-face by the US Federal Reserve. The prospect of easier monetary policy, combined with hopes that the economy would remain robust, gave markets a considerable boost. The BB segment, much followed through passive investments (ETFs), outperformed the CCC segment with a total return of 2.5% versus 1.4%, reflecting the inflows into the high yield market, as well as its higher interest rate sensitivity. Except for Asia, emerging markets performed in line with US and euro high yield bonds. At the sector level basic materials and automotive led the way with returns of 3% (we are overweight both). Real estate, technology and healthcare (underweight) and energy (overweight) were relative underperformers. Thanks to good security selection in most sectors and an underweight in CCC bonds, the strategy (gross, EUR hedged) was able to outperform. In what has not been an easy first six months of the year, with good CCC performance, we managed to generate a small outperformance versus the benchmark, in spite of the more defensive positioning.

Kyle Kloc
Senior Portfolio Manager

We benefited from more than 10 rating upgrades from high yield to investment grade in the first half of 2019. This trend is likely to flatten off after the latest upgrade of Tesco. We still anticipate high volatility in the second half of the year. We continue to face idiosyncratic risks, although these also open up new investment opportunities. We reduced European bonds in recent weeks, while building up positions in emerging markets. However, we remain overweight in Europe, neutral in the US and underweight in emerging markets. We regard the market as fairly valued based on the economic outlook and the estimated default rates. With a spread of 4.1% over US Treasury bonds (benchmark: ICE BofAML Global High Yield Index), spreads are above their pre-financial crisis lows of 2.3% and the low of 3.5% in the autumn of 2018. Investors are therefore being more cautious than in the past. We regard this as a supportive factor in assessing the market's potential.

Credit Exposure

The credit risks in the portfolio are measured through credit exposure. At the bond level, this corresponds to the product of credit spread and spread duration, i.e. the product of risk premium and its sensitivity. At the portfolio level, this corresponds to the sum of the weighted credit exposures of all bonds.

The advantage of this steering parameter is that it includes not only the credit spreads but also their sensitivity. Short-term bonds with very high spreads can be just as risky as long-term bonds with very low spreads. It is therefore crucial to steer both elements when managing a fixed income portfolio. Moreover, it is empirically proven that a stable relationship exists between spread level and spread volatility, i.e. the higher the credit spread of a bond, the higher its volatility.

If the targeted credit exposure is not reached through pure security selection, it can be approached through credit default swaps.

Credit Exposure	Portfolio	Benchmark	Relative Difference
Credit Exposure	12.67	13.50	-6.12%

Historical Credit Exposure Difference

Duration

The interest rate risks in the portfolio are expressed by means of duration. The Macaulay duration is a measure of the average length of time for which money is invested. It represents the weighted average term to maturity of the cash flows from a bond. The modified duration measures the sensitivity of a bond to changes in interest rates.

Modified Duration			
	Portfolio	Benchmark	Difference
Modified Duration to Worst	3.3	3.4	-0.1

Historical Effective Duration

Up to June 2017, the graph represents the effective duration, since July 2017 it reflects the modified duration to worst.

Active Share and Tracking Error

Active share and tracking error are metrics used to measure the degree of active management in a portfolio.

Active share is the percentage of a portfolio that differs from its benchmark. It considers the overweights and underweights of the portfolio's issuer holdings relative to their weights in the benchmark. An active share of zero means the portfolio is identical to the benchmark, whereas a value of 100 means there is no overlap with the benchmark.

Tracking error is another metric that measures deviation versus the benchmark. Whereas volatility measures the absolute standard deviation of a portfolio, tracking error measures the volatility relative to the benchmark. In other words, it measures the volatility of the differences in returns between a portfolio and benchmark.

Cremers and Petajisto¹ compare these two metrics for measuring active management. Tracking error focuses on factor timing, which involves bets on systematic risk factors. In contrast to this, active share looks at the individual stock/bond picks. Based on the two metrics, Cremers and Petajisto distinguish between four different types (see diagram below). A diversified stock/bond picker can be very active despite the low tracking error because the security selection within certain sectors can result in significant deviation from the benchmark positions. Compared with this, a fund that focuses on factor bets can have a large tracking error even if there are no substantial deviations from the benchmark positions at the security level. The authors conclude in their study that among the funds they examined, those with the highest active share outperform their benchmarks both before and after costs on a statistically significant basis.

¹: K. J. M. Cremers und A. Petajisto, 2009, How Active Is Your Fund Manager? A New Measure That Predicts Performance, Review of Financial Studies, 22(9):3329–3365.

Active Share and Tracking Error	Portfolio
Tracking Error 1 Year	0.79%
Annualised Tracking Error 3 Years	0.71%
Annualised Tracking Error since Strategy Start (01.04.2012)	1.09%
Active Share	68.87%

Scenario Analysis

Data as of June 2019

Scenario analysis: Total Return	Good Case	Base Case	Bad Case
Credit spread change	-100 bps	None	+200 bps
Interest rate change	+50 bps	None	-50 bps
	Expected Total Return		
Default rate 2%	6.8%	5.1%	0.1%
Default rate 4%	5.8%	4.1%	-0.8%
Default rate 6%	4.8%	3.2%	-1.6%

Source ICE BofA Merrill Lynch Global Research

The future performance of the portfolio is influenced by various factors. Three key influence factors are the credit spreads, the interest rate level and the default rates. Excluding all other performance drivers, we expect the following performance developments for the portfolio in the next 12 months. A scenario analysis is not a forecast, but rather indicates the magnitude of influence factors (the credit spread, interest rate level and default rates in this case). The current Key Figures of the Global High Yield Universe:

Key Figures of the Global High Yield Universe	Benchmark
Duration to Worst	3.4
Yield to Worst	5.5%
Credit Spread (bps)	418
Average Rating	B+

Source ICE BofA Merrill Lynch Global High Yield Index (HW00)

The calculations are based on the benchmark ICE BofA Merrill Lynch Global High Yield and the 5-year US Treasury yield. The recovery value is estimated to be 40%.

Good case: negative correlation between credit spread and interest rate movements. The credit spreads fall by 100 bps, whereas the 5-year US Treasury yield rises by 50 bps.

Base case: no movement in credit spreads or interest rates.

Bad case: negative correlation between credit spread and interest rate movements. The credit spreads rise by 200 bps, whereas the 5-year US Treasury yield falls by 50 bps.

»» *Added return through investment in substantially undervalued high yield bonds in combination with proven credit research expertise and an active top-down approach.*

Investment Strategy | Track Record

Investment Objective

The investment objective of our global high yield corporate bond strategy is to outperform the benchmark by 1% p.a. throughout the credit cycle by means of active management. We manage the strategy against the ICE BofAML Global High Yield Index (HW00). We seek to deliver systematic excess returns in stressed markets and to match benchmark returns in positive market environments.

Investment Philosophy

We aim to produce outperformance versus the benchmark through active management, with the objective to deliver systematic excess returns in stressed markets, while at least matching benchmark returns in positive market environments.

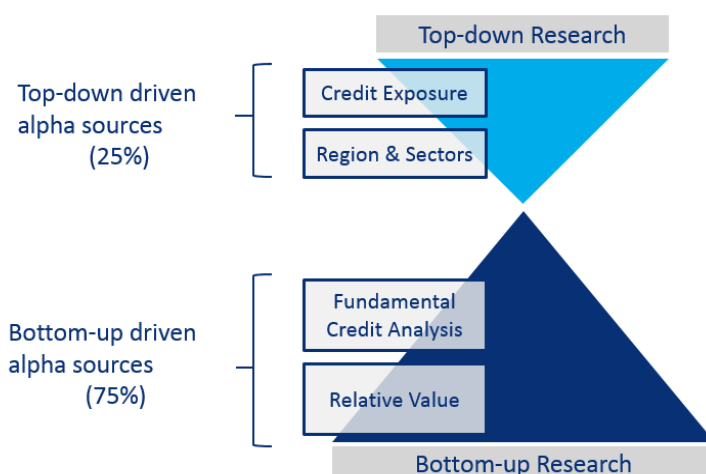

We believe that this is best achieved through a disciplined portfolio construction process that reflects the systematic implementation of four independent and complementary sources of alpha:

Top-down

- Credit exposure
- Region / sector allocation

Bottom-up

- Fundamental issuer analysis
- Relative value

We view the following steps as performance drivers:

- Rigorous macroeconomic assessment
- Credit quality assessment of issuers and securities
- Relative value determination of individual securities

Through our team approach and disciplined investment process that is supported by strong credit research as well as proprietary models, we are able to cover a broad spectrum of the global high yield bond universe.

As a result, we are well positioned to identify the best potential opportunities that the market offers at any given time.

Investment Universe

The investment universe is determined by the benchmark universe, which comprises >3,000 bonds globally. Senior bonds represent the bulk of the investment universe. Subordinated bonds account for around 10%. The credit quality of the benchmark index has historically averaged B+.

In line with the benchmark index, the investment universe of our global high yield corporate bond strategy includes issuers across all industry sectors. Also in line with the index, we do not invest in loans. 80% of the global high yield corporate bond strategy is invested in bonds with a minimum issue size of USD 250 million.

As off-benchmark investments, we invest opportunistically in corporate bonds that are still officially rated as investment grade but trade as high yield bonds (market implied rating), floating-rate notes and unrated bonds. We will also consider convertible bonds that trade close to their bond floor (leveraging our deep expertise in convertible bonds). Off-benchmark investments comprise a maximum of 10% of the portfolio.

Track Record of the Global High Yield Corporate Bonds Strategies

Fisch manages high yield portfolios since 23.01.2006.

The Global High Yield Corporate Bonds Strategy has been implemented relative to the ICE BofA Merrill Lynch Global High Yield Index (HW00), EUR hedged since 01.04.2012.

Annualised Return since Inception (23.01.2006)	7.49%	6.47%	1.02%
Volatility since Inception (23.01.2006)	8.88%	9.70%	-0.82%
Sharpe Ratio since Inception (23.01.2006)	0.71	0.55	0.17

Note Before 01.04.2012 the Global High Yield strategy was managed benchmark agnostic and had no outperformance target. With 30-80 positions the portfolio was more concentrated. Since 01.04.2012 the strategy is managed relative to the ICE BofA Merrill Lynch Global High Yield Index (HW00), EUR hedged.

Global High Yield Bonds

Market Size

Source ICE BofA Merrill Lynch Global Research, S&P LCD

The total market of high yield corporate bonds has grown rapidly in recent years. Since the financial market crisis of 2008, the market depth in European bonds has nearly doubled. This has come about as a result of the negative ratings trend of several countries – without a rise in the default rates for industrial bonds. Hence, the market is more broadly based regionally.

The developments in Europe together with the trend towards disintermediation in emerging market regions open up new opportunities for globally focused strategies in high yield bonds. The majority of issuers are still from North America, followed by Europe. Issuers from Asia, Latin America and the Middle East provide additional diversification.

Interest Rate Trend for 5-Year US Treasury

The bonds in which FISCH Bond Global High Yield Fund invests are largely denominated in USD.

Credit Spreads (bps)

Source ICE BofA Merrill Lynch Global Research

Emerging market high yield bonds (EM HY) exhibit the highest credit spreads relative to US Treasuries over time.

Default Rates in Per Cent (LTM Issuer Default Rate)

Source ICE BofA Merrill Lynch Global Research

Default rates are a key indicator of the strength of economic momentum. In times of high default rates (recession, restrictive monetary policy, high debt, currency crises), investors demand a high credit spread. By historical standards, the default rates are currently low in all regions, owing to the low interest rates and moderate global economic growth.

» *Transparency, open communication, entrepreneurial spirit and mutual respect are the principles that define our corporate culture, and which we put into practice every day. These are key factors for our long-term performance as an asset manager, and hence for the success of our investors.*

Fisch Asset Management

Brief Profile

Kurt Fisch
Founder

Fisch Asset Management is an asset manager specialising in select investment strategies. It offers convertible bond, corporate bond and absolute return solutions. Its objective is to create added value for long-term investors through active management. The company's core strength lies in its long experience in the fields of credit and momentum.

Founded in Zurich in 1994 by two brothers, Kurt Fisch and Dr Pius Fisch, Fisch Asset Management has made a name for itself as an independent asset manager and as a global leader in convertible bonds.

Dr. Pius Fisch
Founder

We view our corporate culture, which includes transparency, open communication, mutual respect, team spirit and entrepreneurial incentives, as the basis for our long-term success. We are proud of the tremendous success that Fisch has achieved over the past 25 years thanks to this enduring corporate philosophy.

Fisch Asset Management has recorded a strong rise in assets under management in the past years. As of 28.06.2019 the assets under management amount to CHF 10.55 bn.

Our offering

Actively managed mutual fund and segregated account solutions in three asset classes:

Convertible bonds (since 1994)

We manage four different global strategies (Defensive, Opportunistic, Dynamic and Sustainable) covering the entire spectrum with a range of risk profiles.

Corporate bonds (since 2006)

We manage five strategies (Global High Yield, Global Corporates, Emerging Market Corporates Defensive, Emerging Market Corporates Opportunistic and Bond CHF Investment Grade).

Absolute Return (since 2009)

We manage two strategies (Absolute Return Fixed Income and Absolute Return Multi Asset).

Disclaimer

This documentation (“Document”) is provided solely for information purposes and is intended for institutional investors only. Non-institutional investors who obtain this Document are please asked to discard it or return it to the sender. This presentation is not a prospectus or an offer or invitation to buy financial products.

This Document is provided for marketing reasons and is not to be seen as investment research. This Document is not prepared in accordance with legal requirements designed to promote the independence of investment research, and that it is not subject to any prohibition on dealing ahead of the dissemination of investment research.

HISTORICAL PERFORMANCE IS NO GUARANTEE OF FUTURE PERFORMANCE.

The performance data do not take account of commissions and costs incurred on the issue and redemption of units. Gross performance figures do not include costs which are charged to the investment fund. Such costs and commissions result in a decrease of the achieved performance. The Document contains gross and net performance figures. The analyses of performance or components of performance (e.g. contribution/ attribution) and of other aspects (volatility, risk figures, etc.) are calculated on the basis of gross figures. The gross figures are also appropriate for the evaluation of management performance and for strategy benchmark comparisons. Net figures reflect the performance of a fund after costs.

Investments in financial products are associated with risks. It is possible to lose the entire amount of the invested capital. Regarding the specific risks of an investment, please refer to the currently valid fund documentation.

The key investor information document (KIID), the prospectus (including the management regulations) as well as the annual and semi-annual reports are available free of charge from the management company, representative and paying agent in Switzerland (RBC Investor Services Bank S.A., Esch-sur-Alzette, Zurich Branch, Bleicherweg 7, 8027 Zurich), from the paying agent and information office in Germany (Marcard, Stein & Co AG, Ballindamm 36, 20095 Hamburg), from the paying agent and representative in Austria (Vorarlberger Landes- und Hypothekenbank Aktiengesellschaft, Hypo-Passage 1, 6900 Bregenz) or on the Internet at www.fundinfo.com.

Insofar as the information contained in this Document comes from external sources, Fisch Asset Management AG cannot guarantee that the information is accurate, complete or up to date.

The index data referenced herein is the property of Merrill Lynch, Pierce, Fenner & Smith Incorporated (“BofAML”) and/or its licensors and has been licensed for use by Fisch Asset Management AG. BofAML and its licensors accept no liability in connection with its use. See: <http://www.fam.ch/en/terms-of-use/> for a full copy of the Disclaimer.

Statements concerning future developments and estimates are based on assumptions that may be inaccurate, that could change or that are based on simplified models. Fisch does not know whether its statements concerning future developments will be correct. Fisch may also change its opinion concerning a future development. In such case, Fisch has no obligation to inform anyone about the change in opinion.

The purchase of a product managed by Fisch should only be based on the currently valid documents (fund prospectus, fund agreement, KIIDs, etc.). The currently valid documents are available at www.fundinfo.com. Before reaching a decision to buy, each institutional investor must determine based on their specific situation whether they are even permitted to buy the product, and if yes, whether they have the necessary risk tolerance for the corresponding product. Fisch expressly states that this Document is not intended for private investors and advises institutional investors to first consult financial, legal and tax experts who are familiar with their specific situation and understand the product.

This Document is especially not intended for US persons (private or institutional) as defined by the FATCA legislation or under SEC regulations. US persons may not invest in any investment funds managed by Fisch, and Fisch is also not permitted to manage mandates from US persons. If Fisch learns that a US person is invested in a product it manages, it will inform the fund management company and, if necessary, other persons and demand that the US person sell the product.

Fisch has outsourced the storage and archiving of company data to a specialized third party firm. The outsourcing is limited to the storage and archiving of data and occurs abroad. The processing of data is done within Fisch and is not outsourced. The activity of the third party firm essentially consists of setting up and maintaining the corresponding servers. The regulatory authorities and the auditing firm have been informed by Fisch about the outsourcing, and the data protection and regulatory requirements are fulfilled.

Fisch accepts no liability for damages arising directly or indirectly as a result of this Document.
