Fund managers comment

The Fund presented a negative performance under highly volatile markets due to macro shocks coming mainly from Europe. The Fund trimmed some property bonds to avoid the defaults. It also diversified into some non-China sector taking the opportunity of general Macro softening. We will continue closely monitoring the upcoming policy support from Chinese authorities.

The Asian high yield market had another weak month in Feb, dominated by the China property sector and the Russia-Ukraine war. The JACI Non-Investment Grade Corporates Total Return Index was down 4.8% in Jan. The JACI composite total return index was down 4.4%, worst monthly return since March 2020. The total High Yield new issues out of Asia was only USD 1.4 Billion.

China property bonds started the month in a weak tone after the Chinese New Year, mainly driven by Zhenro Properties sudden request for extension of its perpetual March 05 bond as well as Yango Group's default, which caught the market off guard. Investors were trying hard to figure out what had happened to Zhenro as it had announced in early January to fully redeem its perpetual bond in advance and set the payment date on March 05. If things could turn sour so abruptly for a stable player such as Zhenro, then other developers might face similar challenges. More negative news such as Shimao's dispute with its trust investors further dampened the market. On the policy front, Chinese authorities injected multiple rounds of liquidity in the financial systems for a total of some RMB 390 billion. Certain cities were

On the policy front, Chinese authorities injected multiple rounds of liquidity in the financial systems for a total of some RMB 390 billion. Certain cities were reported to lower down-payment requirements and mortgages rates, but the rebounds were shallow and short-lived. The Non-property sector held relatively well amid the property turbulence.

The non-China HY sector also softened this month as the Russia-Ukraine war sent the global risk assets into a risk-averse mode. The Macau gaming sector continued to slide amid the outflows from international investors. India/Indo names outperformed thanks to their exposure to energy/commodity sectors. In Feb, the RMB appreciated against USD, which was stable against most major currencies. CNH strengthened by 0.89% and CNY was up by 0.82% respectively, when DXY index was up by 0.17%.

In the medium to long run, we still see RMB a solid currency, driven by the strong performance of China export and the rising overseas demand for RMBdenominated assets. We continue to see RMB comparably attractive on a mid-term risk-adjusted basis comparing to other Asian currencies. Hence, the Fund will maintain its exposure to the RMB.

IMPORTANT NOTES AND KEY FACTORS

- BOCHK RMB High Yield Bond Fund (the "Sub-Fund") described in this document is a Sub-Fund of BOC (Europe) UCITS SICAV (the "Fund"), a Luxembourg domiciled umbrella investment company with variable capital (société d'investssement à capital variable) incorporated under the form of a société anonyme in the Grand Duchy of Luxembourg. It qualifies as an undertaking for collective investment in transferable securities ("UCITS" under Part 10 the 2010 Law.
- It is provided for information purposes only which does not constitutes an offer or a solicitation by anyone in any jurisdiction in which such offer is unlawful or in which the person making such offer or solicitation is not qualified to do so or to anyone to whom it is unlawful to make such offer or solicitation.
- Investors should not make any investment decisions based only on this document alone, but should read it together with the Prospectus of the Fund including the Sub-Fund and the relevant Key Investor Information
 Document (KIID) as amended and supplemented from time to time and should refer to the "Risk Factors" section of the Prospectus and the KIID for further details relating to the risk of the Sub-Fund. A current prospectus and
 a KIID available from www.luxcellence.com must accompany or precede this material if it is distributed to prospective investors. The capitalised terms used in this document have the same meaning as the terms used in the
 Offering Documents of the Sub-Fund.
- The Sub-Fund is an investment fund and not a bank deposit. The repayment of principal is not guaranteed. Investors should be aware that the value of shares of the Sub-Fund may fall as well as rise. Investors may lose a substantial proportion or all of their investment in the extremely adverse condition.
 - substantial proportion or all of their investment in the extremely adverse condition. The Sub-Fund is subject to the risks of investing in emerging markets including the People's Republic of China ("PRC") and investments into non-investment grade and non-rated bonds are subject to higher credit risk. The Sub-Fund is exposed to liquidity and operational risks linked to investments in the PRC and to the RCFI system. RMB is not a freely convertible currency and is subject to foreign exchange control policies of and repatriation restrictions into proceed by the PRC. There is no guarantee that RMB will appreciate in value. Investors must accept the exchange rate risks if investment is indeed in HRO or USD. The Sub-Fund may use derivative instruments, which means financial instruments whose value depends on those of an underlying asset. Therefore, fluctuations in the price of an underlying asset, even if minor, could lead to significant variations in the price of the corresponding derivative instrument. With the use of over-the-counter derivatives, there is a risk that the counterparty to the transactions will wholly or partially fail to honor its contractual obligations. This may result in a financial loss to the Sub-Fund.
 - The Sub-Fund may from time to time hold a high portion of cash and deposits as it may take a prolonged period of time to invest into debt instruments and/or the Investment Fund Manager may consider there are insufficient investments available in the market.
 - Investment vehicles in the off-shore RMB bond market are relatively limited. Liquidity and related returns may be affected.
 - There are risks and uncertainties associated with the tax rules and practices of the PRC.
- The Sub-Fund may be subject to risks associated with investments in collective investment schemes, investment portfolios and/or funds managed by third parties/external asset managers.
 The investments of the Sub-Fund may involve risks including but not limited to substantial credit/counterparty downgrading, market volatility, interest rate and foreign exchange, liquidity, vulnerability to economic cycles growth, regulatory and policial risks.

BOC (EUROPE) UCITS SICAV (欧洲) 有限公司 BOCHK RMB HIGH YIELD BOND FUND Class CD EUR-H FOR PROFESSIONAL INVESTORS ONLY March 2022 (Covering the periode from 01 February to 28 February 2022)

Total Net Assets

The Total Net Asset shows the difference between assets (cash or equivalent holding, total market value of all assets held) and current liabilities including accrued expenses.

Sharpe Ratio

The Sharpe Ratio shows the relationship between a fund's risk and its return. The return on a risk-free asset (LIBOR in base currency of the fund) is deducted from the fund's annualised average. This net return is then divided by the total risk. A higher
