## 5.1 ESG / Overview of ESG Indicators

**Reporting Period:**  
28/02/2022 - 31/03/2022

**ISIN:** LU1120174880

**Benchmark:**  
Markit iBoxx EUR Corporates

**NAV:**  
526,318,430

**Fund Currency:**  
EUR

**Asset Class:**  
Fixed Income

**Strategy:**  
Euro/Credit

Factor	31/03/2022				28/02/2022			
	Fund	BM	Weight (Fund)	Weight (BM)	Fund	BM	Weight (Fund)	Weight (BM)
E	7.32	7.40	22.07	21.58	7.33	7.36	21.63	21.72
S	5.34	5.32	40.70	42.25	5.37	5.32	40.99	42.10
G	5.40	5.28	37.23	36.17	5.44	5.26	37.38	36.18
ESG weighted Score	5.67	5.60			5.70	5.60		
IAS	7.13	7.01			7.24	7.00		
ESG Rating	AA	A			AA	A		

E (Environmental), S (Social), G (Governance).

The Score is between 0 (worst) and 10 (best).

The ESG weighted Score is an average of the ESG Scores using company specific weights.

The Industry Adjusted Score (IAS) is additionally normalized in relation to a comparable industry group according to key ESG-Issues.

The IAS is mapped to a Letter Rating between AAA and CCC according to a fix rule.

Carbon Footprint: weighted average carbon intensity measured in T of CO2 equivalents per million of USD revenues. The indicator is the sum of Scope 1 (direct emissions) and Scope 2 (indirect emissions that result from the consumption of electricity purchased by the company). The portfolio Carbon Footprint is a value-weighted average of the holdings in the portfolio.

## 8 Glossary

Alpha	The asset manager's active management performance. Alpha is an indicator for the fund's performance relative to the benchmark index. There are different conventions for calculating alpha: Quoniam defines alpha as the difference between the account's performance (excluding fixed costs) and the performance of the benchmark index (in accordance with ® GIPS). This definition differs from the commonly used concept of 'Jensen's alpha', which refers to the risk-adjusted excess return of an account over the benchmark index.
Beta	Beta indicates the systemic (market) risk of equities. A share (or portfolio of shares) with a beta of 1 has approximately the same sensitivity to changes in the benchmark index as the benchmark itself.
Coupon	Nominal interest rate
Discount margin (DM)	Theoretical interest rate mark-up on the reference index of a floating-rate bond, based upon which the bond would trade at par.
Dividend yield	The ratio of dividends paid over the last twelve months and the current share price, expressed as a percentage.
Earnings growth	Growth of earnings per share – defined for the purposes of performance reporting as the ratio of earnings data for the next financial year (FY1, cf. P/E ratio), based on analysts' estimates, to data from the last published financial statements. <u>FY2 denotes the financial year following FY1.</u>
Fixed costs (overheads)	A fund's fixed costs include: management fees, custodian bank fees, securities account fees, auditing fees, publication costs, plus any debit interest incurred.
GIPS	Global Investment Performance Standards – internationally accepted standards for the presentation of investment results.
Information ratio	An indicator for assessing management performance, defined as the ratio of outperformance (® alpha) to active risk exposure (® tracking error).
Internal Score	Quoniam determines a so-called <i>Internal Score</i> for ABS, RMBS, CMBS, CDOs, CLOs and CFOs. Based on most recent performance reports, this score provides an assessment of how such structures are collateralised, largely independent of ratings. The following parameters are used for this purpose:
	<ul style="list-style-type: none"> <li>The <i>Reserve Amount (RA)</i> expresses the excess collateralisation of a specific transaction tranche, as a percentage.</li> </ul>
	<ul style="list-style-type: none"> <li>The <i>Worst Loss (WL)</i> to occur for an ABS transaction is based on the assumption that a default occurs for all receivables due for more than 90 days, and the recovery rate is only 50%.</li> </ul>
	<ul style="list-style-type: none"> <li>The <i>Safety Ratio (Adj. SR)</i> indicates the multiple of estimated Worst Loss that can occur without eroding the substance of the tranche analysed. The indicator is expressed as the logarithm of this multiple.</li> </ul>
	<ul style="list-style-type: none"> <li>The <i>Internal Score</i> translates Adj. SR into a verbal, analytical assessment of the transaction.</li> </ul> <p>Even though we take due care in collating and analysing all underlying information from rating agencies, investor reports, and brokers, as a manager we cannot accept any liability for the correctness of such data and information, or for the resulting analyses and investment decisions. A full description of the methodology applied, and of the underlying data, is available upon request; this information is subject to certain licensing restrictions.</p>
Leverage	Leverage is defined as the aggregate of long exposure and short exposure.
Long exposure	Long exposure is defined as the sum of all delta-weighted positions with a positive value, relative to the fund's assets.

## 8 Glossary

Macaulay Duration	(Remaining) lifetime of a bond, weighted using the present values of its cash flows.
Market capitalisation	Average market capitalisation of securities held by the fund (in € million), including only those issues with free float.
Market price (investment currency)	Market price in investment currency, as at the valuation date. For asset-backed securities, this price information is provided by Markit, and is subject to a disclaimer issued by that vendor. Please refer to our related letter for details. (We will be pleased to provide an additional copy of this letter upon request.)
Maturity	A bond's (final) maturity date.
Modified duration	Sensitivity to a change in yield.
Net exposure	Net exposure is defined as long exposure less short exposure.
Number of issues	The number of issues indicates the number of individual issues contained in the fund, or in the benchmark index.
P/E ratio (current, FY1, FY2)	Price/earnings ratio, defined as the ratio of current share price to earnings per share. "Current" P/E is based on earnings for the last financial year for which financial statements have been published; "FY1" P/E is based on analysts' earnings estimates for the financial year following the financial year for which financial statements have been published; "FY2" is based on estimated earnings for the financial year following FY1.
Position	Referring to an investment instrument, a 'position' is defined as follows:
	<ul style="list-style-type: none"> <li>a) for instruments that are not derivatives, the instrument's market value (which may be negative);</li> <li>b) for instruments that are derivatives, the market value of the underlying instrument (which may be negative). For the sake of clarity, the negative market value is included for underlying positions that represent actual short positions.</li> </ul>
Price to book value	Valuation indicator, defined as the ratio of current share price to net asset value (equity) per share.
Price to cash flow	Current share price, divided by the cash flow per share.
Quoted margin	Interest rate mark-up on the reference index of a floating-rate bond (e.g. Euribor + 0.15%).
Return on equity	Indicator for a company's profitability; defined as the ratio of profit to equity invested.
Sharpe ratio	The Sharpe ratio is a measure for the risk-adjusted performance of an asset class. It is defined as portfolio performance less the risk-free interest rate, divided by $\sigma$ volatility. The primary purpose of the Sharpe ratio is to assess whether the selected asset class (equities, bonds, etc.) was the right one; it is less appropriate for assessing management performance (cf. $\beta$ information ratio).
Short exposure	Short exposure is defined as the sum of all delta-weighted positions with a negative value, relative to the fund's assets.
Spread duration (SDur)	Sensitivity to a change in credit spread. For fixed-coupon bonds, spread duration is identical to modified duration. For floating-rate bonds, spread duration is identical to modified duration of a fixed-coupon bond with the same remaining time to maturity.

## 8 Glossary

Swap	A swap is a bilateral agreement to exchange assets or future cash flows, subject to certain conditions. Swaps can be used to hedge specific portfolio risk, or to add exposure to a portfolio in order to optimise returns. Examples include:
	a) Credit Default Swap (CDS) – A Credit Default Swap is a credit derivative that can be used to trade the default risk exposure of a loan or bond, or of a reference entity. The protection buyer usually pays a regular fee, and will receive a compensation payment if the credit event defined at the outset should occur.
	b) Equity swaps are characterised by an exchange of cash flows, whereby one cash flow is linked to a reference interest rate, and the other reflects the performance of a share or equity index.
Total Expense Ratio (TER)	TER reflects the ratio of all non-transaction costs charged to the fund's assets, to the fund's average net asset value during the current financial year. Transaction costs are not included in the TER.
Tracking error	The tracking error is an indicator for the risk caused by active management decisions. It measures the fluctuation range of outperformance (® alpha). Tracking error is defined as the annualised standard deviation of monthly alpha values. (Also refer to ® volatility.)
Value-at-risk (VaR)	VaR is a measure for the maximum potential loss exposure of a portfolio that is not exceeded within a given holding period, and based on a given probability (confidence interval). VaR is usually derived from ® volatility.
Volatility	Volatility is an indicator for the absolute (total) risk of an asset class. It measures the fluctuation in overall performance. Volatility is defined as the annualised standard deviation of monthly returns.
Weighted average life (WAL)	Average (remaining) lifetime of a bond with prepayments (e.g. asset-backed securities).

## 9 Remarks to Liquidity Risks for Bonds

### Regulatory Environment

- New regulatory requirements require financial intermediaries to put more capital aside for trading activity
- The willingness of banks and brokers to keep trading inventory in their books has declined considerably

### Market Trends

- Historically low yields led companies to increase leverage and issue more debt
- Outstanding volume in global credit market has almost tripled

### Liquidity

- Higher demand meets less potent financial intermediaries
- Single purchases or sales could lead to meaningful price fluctuations
- Liquidity can entirely dry out in particular market situations (sell-off)
- New structural buyer, the ECB, is entering the market place for corporate bonds
- Scenarios can be conceived such that liquidity bottlenecks would make divestments either entirely impossible or only executable at material price discount
- Redemptions cannot be executed or only partially carried out, in which case we would promptly inform our clients.
